## Flarium Releases the New Version 2.2 of Animated Chart

” *Flarium Ltd. has released version 2.2 of Animated Chart, a Windows 98/Me/NT/2k/XP/Vista compatible Flash tool for publishing animated charts and graphs to websites. Enhance your website with a professional flash chart.*

Vancouver, Canada – November 11, 2007 – **Flarium** announced the release of **Animated Chart 2.2**, a Windows 98/Me/NT/2k/XP/Vista compatible Flash tool for publishing **animated charts and graphs** to websites. Bright and attractive chart can become both decorative and functional part of your website. Business information given in a clear graphic form is much more comprehensible for your website visitors and potential clients than information in writing. So, **Animated Chart** is a powerful marketing tool which helps to promote your business and attract customers.

**Animated Chart** enables you to create your own chart with various animation effects and add it to your website without mastering Flash and HTML. It can be used by common users as well as by professional web-designers. There are only 3 simple steps to create a chart. The first is to choose a chart type. **Animated Chart** has a good choice of chart types to match any website design - Column, Bar, Line, Pie, XY (Scatter), Area, Doughnut, Bubble, Radar. Almost every chart type has subtypes to satisfy your wants the best. The second step is to specify the data source. Data can be typed manually or imported from file (Microsoft Excel or text file). The last step is to customize a chart. You can add animation effects to every chart element - just click it and select an effect: Appear, Grow, Fall, Neon, Slide, Gather, Swing, Rotate. You can also choose a color scheme for the entire chart or change color of separate elements to make your chart ideally fit for your website. After this, export result chart as image file, SWF file, HTML file or a projector file, or copy its HTML-code to clipboard for easy pasting it into the HTML-code of your website. Your chart can be static (in image format) or animated. Look at various chart samples and download free trial version of **Animated Chart** Standard Edition at [www.animatedchart.com](http://www.animatedchart.com).

**Animated Chart** Pro edition generates real time dynamic flash charts and graphs based on live data.
