## Desktop Calendar Wallpaper VS. Calendar Software

**Desktop calendar wallpaper** is a downloadable picture with a calendar for one month, two months or even for a year. In ready-to-use **desktop calendar wallpapers**, calendar behaves as a part of background picture that means it can't be modified and customized. So, you have to look for new **calendar wallpaper** each time the period of the calendar ends.

And it's not the only trouble of using ready **calendar wallpapers**. If you have a widescreen monitor or laptop, you should search for wallpapers of certain size, so that the calendar shouldn't be distorted while stretching a standard picture to fit screen size. And the choice of calendar wallpapers will be very limited. Even though Internet seems endless and the quantity of **calendar wallpapers** to choose from seems large too – you will never find **calendar wallpapers** with the picture of your son or your dog.

Thus, ready-to-use **desktop calendar wallpapers** are good but not perfect. Of course, nothing is perfect, but there is a neat solution of calendar wallpapers which can eliminate browsing web every month to find something suitable.

**Screen Calendar** is **calendar software** which allows you to **put calendar on any desktop wallpaper**. You choose wallpaper yourself, and **Screen Calendar** adds an **interactive desktop calendar** to them. So, you get exactly what you need.

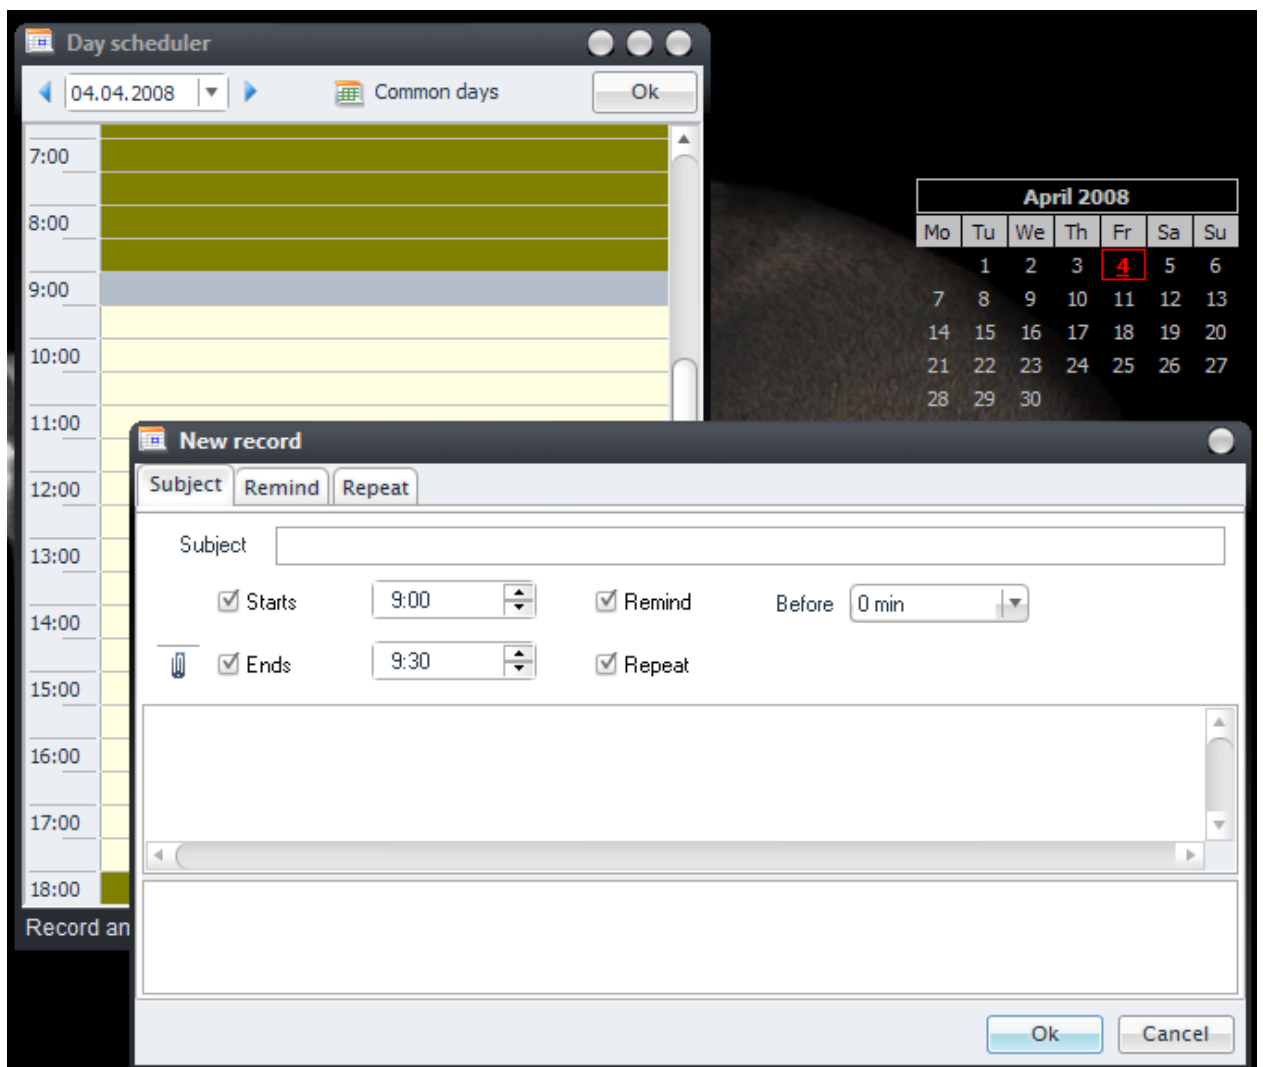

Besides, **Screen Calendar** will help you to **manage your wallpapers**. It has the option of [background changer](#) so that you may change wallpaper automatically in a given period of time (from 5 minutes to 1 month). If you want to change **desktop calendar wallpaper** each month as with ready **calendar wallpapers**, simply set auto-change to one month and you'll have new background image on the 1<sup>st</sup> of each month.

Another handy option is choosing [position of background image](#). Using **Screen Calendar**, you can use not only Windows's standard positions (center, tile and stretch) – you can align your image to any place of the desktop or stretch it without distortion to fit even a widescreen monitor (that's what Windows doesn't allow to do).

And the main advantage of **calendar program** over ready **desktop calendar wallpapers** is that the **desktop calendar** serves not only as a calendar itself but as a **full-functional PIM** for planning and scheduling as well. **Screen Calendar** is a great **scheduling calendar** which allows to:

- ✓ Click a date cell directly on the desktop to open [day planner](#) and add, modify or delete records
- ✓ Move mouse to a date cell to [read records on the desktop](#)
- ✓ [Mark dates](#) with appointments
- ✓ [Recur records](#) with any period of time
- ✓ Set [reminder](#) which can be not only playing sound, but also showing a message or running any application
- ✓ Export/import [iCalendar events](#) (including [Google Calendar](#))
- ✓ See current date on the desktop calendar and on the [system tray icon](#)
- ✓ Synchronize records with MS Outlook and display MS Outlook schedule on the desktop
- ✓ [Print notes](#) and choose date range for printing
- ✓ Attach any files to your records

Besides, desktop calendar made with **Screen Calendar** is **fully-customizable**, and you can change its view to your liking at any moment:

- ✓ Choose any [calendar size](#) – small or full screen calendar
- ✓ Choose any [calendar placement](#) on your desktop
- ✓ Change [fonts and colors](#)
- ✓ Set [transparency](#) of the calendar
- ✓ Show the whole [next month](#), its half or current month only
- ✓ [Download](#) ready-to-use skins, use [Winamp skins](#) for the calendar or [create your own skin](#)
- ✓ Use [chameleon skin](#) to see contrast calendar over any background
- ✓ Choose [month's appearance](#) and [week orientation](#) (horizontal or vertical)
- ✓ Show or hide [weeks numbering](#)
- ✓ Choose [week starting point](#)

So, stop browsing web and searching for **free desktop calendar wallpaper** for May, desktop calendar wallpaper for June, etc. You need only your favorite background image and **Screen Calendar software** to make your own **desktop calendar wallpaper for any month**. After installing **Screen Calendar** and adjusting all the options, you'll never worry about having **free desktop calendar wallpapers** again. **Screen Calendar** is both **business and family calendar software** which gives you not only **desktop calendar wallpapers**, but also the **calendar planner, calendar reminder** and much more great features.
