Flarium Ltd. Releases the New Version of its Calendar Wizard Software

” *Flarium Ltd. has released the new version of Calendar Wizard – software for creating custom calendars. The new Calendar Wizard 3.0 allows easy creating calendar grids and saving them in nine different formats.*

Vancouver, Canada – August 10, 2008 – Flarium announced the release of the new Calendar Wizard 3.0 - a program that helps to create custom calendars and save them in a variety of formats for later integration in documents, placing them on desktop wallpaper, making printable calendars, etc.

What's new in version 3.0?

- New plug-in for creating swf. Font can be embedded into swf
- Corel Draw X4 support
- For HTML:
 - Unicode (UTF-8) encoding
 - Extended syntax for creating external links to dates
- The semicolon delimiter for Plain Text plug-in

The key features of Calendar Wizard 3.0:

- create calendars either for one month or for the whole year;
- choose variable months layouts;
- choose the type of a month's representation;
- create multi-lingual calendars;
- pick and note events on the calendar;
- create calendars using any color scheme;
- preview the calendar at any stage of its creation;
- split items of days and the calendar gridlines into different layers.

Calendar Wizard is an effective solution for making custom calendar grids. The tool has a wizard-like interface and requires only ten simple steps to create a calendar and format its style to your specifications. The settings to customize in any given calendar are numerous: from font color and style to text orientation and displaying the months' names. The calendar can be as complex as it's needed. The preview helps to control creation process fully. Wizard-like interface of the program allows returning to any previous step to rebuild a calendar instantly. Created calendar layout can be saved in a configuration file for later use. Completed calendars can be saved in swf, pdf, html, jpeg, wmf, emf, xls, cdr, and txt formats.

Calendar Wizard runs under Windows 98/Me/NT/2k/XP/Vista.
