Flarium Ltd. Releases FlashSlider 4.3

” *Flarium Ltd. announced today the release of the new version of FlashSlider - software for creating and web publishing flash slideshows.*

Vancouver, Canada - November 03, 2008 – Flarium Ltd. announced today the release of **FlashSlider 4.3** - easy to use tool for flash slideshow creation.

FlashSlider 4.3 is a tool for easy creating flash slideshows with digital images, transition effects, background music, captions and navigation buttons and publishing them to the Web.

The software generates web ready SWF (Flash) movies, HTML or Macromedia Projector files.

Key features of FlashSlider 4.3:

- supported image formats: JPG, PNG, GIF, TIFF, BMP;
- supported sound formats: MP3, WAV, PCM, ADPCM;
- predefined or random slide transition effects;
- adding titles to slides;
- stop points on every frame of flash slideshow;
- adding URL to the flash slideshow or different URLs to each slide;
- resizing slideshow with mouse.

Flash slideshow is the best way to enliven any web page from MySpace profile to company official website. 100+ transition effects, background music and captions make a slideshow vivid and impressive. Navigation buttons, preloader and assigned URLs add functionality. The result will please you and attract your website visitors.

FlashSlider doesn't require Flash experience or programming skills. Its easy-to-use intuitive GUI lets everyone create flash slideshow in a few mouse clicks and publish in to the Web. Web ready

SWF and an HTML code given by FlashSlider 4.3 is everything one needs to embed flash slideshow into a web page.

FlashSlider 4.3 runs under Windows 98/Me/NT/2k/XP/Vista.
